Understanding Options, Futures, and Derivatives

What Are Derivatives?

Derivatives are financial contracts whose value is derived from the performance of underlying assets such as stocks, bonds, commodities, or market indexes. They are used for hedging risks, speculation, or arbitrage opportunities. Common types of derivatives include options, futures, forwards, and swaps.

What Are Options?

Options are contracts granting the holder the right, but not the obligation, to buy or sell an underlying asset at a predetermined price before or at the expiration date. They come in two main types:

- **Call Options:** Give the right to buy the asset.
- **Put Options:** Give the right to sell the asset.

What Are Futures?

Futures are standardized contracts obligating the buyer to purchase, and the seller to sell, an asset at a specified price on a future date. Unlike options, futures contracts involve the obligation to execute the transaction, making them powerful tools for hedging and speculation.
