- During meiosis, homologous chromosomes separate. This process results in:

- A) Diploid daughter cells
- B) Identical copies of chromosomes
- C) Haploid gametes
- D) Somatic cells

Correct Answer: C

Practice Tip: When tackling multiple-choice questions, eliminate clearly incorrect options first. Focus on key terms and concepts, such as cell structures and processes, to narrow down your choices.

Constructed-Response Question Practice

Example:

Describe the process of DNA replication and explain its importance to cell division.

Sample Answer Outline:

- Initiation at origins of replication
- Unwinding of DNA strands by helicase
- Complementary base pairing by DNA polymerase
- Formation of two identical DNA molecules
- Importance: ensures each daughter cell receives an accurate copy of genetic information

Study Tip: Practice writing clear, concise explanations of biological processes. Use diagrams to visualize steps, which can aid in understanding and recall.

Laboratory Skills and Data Interpretation

The Bio Regents often includes questions that require interpreting experimental data, such as tables, graphs, or diagrams. Here are some tips:
