- Primordial Black Holes: Hypothetical black holes formed shortly after the Big Bang due to density fluctuations.

Types of Black Holes

Black holes are generally classified into three categories:

- Stellar-Mass Black Holes: Ranging from about 5 to 20 times the mass of our Sun.
- Supermassive Black Holes: Millions to billions of solar masses, residing in galaxy centers.
- Intermediate Black Holes: Hypothetical black holes with masses between stellar and supermassive black holes.

Introducing Black Hole 7: The Cosmic Enigma

Black Hole 7 is a designation used by astronomers to identify a specific black hole of interest, often due to its unique features or its role in recent research. Though not as widely recognized as some of the well-studied supermassive black holes, Black Hole 7 has become a focal point in understanding black hole diversity and behavior.
