- Final answer: $\backslash(11x - 2 \backslash)$

Question 2: Geometry ? Find the measure of angle $\backslash(x \backslash)$ in the triangle below:

(Include a diagram of a triangle with two known angles and one unknown $\backslash(x \backslash)$.)

Suppose two angles are 70° and 50° , and the third angle is $\backslash(x \backslash)$.

Solution:

- Sum of angles in a triangle:

$$(70^\circ + 50^\circ + x = 180^\circ)$$

- Solve for (x) :

$$(x = 180^\circ - (70^\circ + 50^\circ) = 180^\circ - 120^\circ = 60^\circ)$$
