- Radiographic Testing (RT): Uses X-rays or gamma rays to visualize internal structures.
- Eddy Current Testing (ET): Employs electromagnetic induction to find surface and subsurface flaws in conductive materials.
- Leak Testing (LT): Detects leaks in products or systems, often using gases or liquids.

Summary:

Understanding each method's principles, applications, and limitations is crucial for certification and practical inspection tasks.

2. What safety precautions should be observed during NDT operations?

Answer:

Safety is paramount in NDT to protect personnel and the environment. Key precautions include:

- Wearing appropriate personal protective equipment (PPE) such as gloves, safety glasses, and respirators.
