Question What are the main features of the modern ABC classification in Class 12 Biology? The modern ABC classification categorizes living organisms into three main domains: Archaea, Bacteria, and Eukarya, based on genetic and molecular evidence, highlighting evolutionary relationships beyond traditional kingdom-based systems. **How does the modern ABC classification differ from the traditional five-kingdom system?** Unlike the traditional five-kingdom system, which classifies organisms based on morphological features, the modern ABC classification uses molecular data like rRNA sequencing to group organisms into three domains, providing a more accurate reflection of evolutionary relationships. **Why is the modern ABC classification important for understanding evolution?** It reveals the evolutionary origins of organisms by grouping them into domains based on genetic similarities and differences, helping to trace evolutionary lineages and understand the development of complex life forms. **Which organisms are classified under the domains Archaea and Bacteria in the modern ABC system?** Organisms that are prokaryotic but differ genetically are classified under Bacteria and Archaea; Archaea often thrive in extreme environments and have unique biochemical features, whereas Bacteria include most common bacteria species. **What are the characteristics of the Eukarya domain in the modern ABC**

classification? The Eukarya domain includes all eukaryotic organisms with membrane-bound nuclei, such as plants, animals, fungi, and protists, characterized by complex cellular organization and presence of membrane-bound organelles. How does molecular evidence support the modern ABC classification? Molecular evidence, especially comparisons of rRNA gene sequences, demonstrates evolutionary relationships among organisms, confirming that Archaea and Bacteria are distinct domains and that Eukarya forms a separate lineage. What is the significance of understanding the modern ABC classification for Class 12 Biology students? It helps students appreciate the evolutionary basis of classification, understand the genetic differences among organisms, and develop a deeper understanding of biological diversity and the tree of life. Can you explain the concept of 'domains' in the modern ABC classification system? Domains are the highest taxonomic rank in the modern classification system, grouping organisms based on fundamental genetic and structural differences, thus providing a broad framework for understanding biological diversity.
