- Open Valleys: The metal flashing is exposed, creating a visible valley line. Often used in specific architectural styles.
- Woven Valleys: Shingles from both slopes are woven together, typically used in certain shingle applications.
- Box Valleys: A variation where the valley is boxed in with additional framing or flashing.

Materials Used in Roof Valley Construction

Choosing the right materials is paramount for a valley's longevity and effectiveness.

Metal Flashing

- Galvanized Steel: Durable and cost-effective; provides excellent protection against water infiltration.
- Aluminum: Lightweight and resistant to corrosion, suitable for areas with high humidity.
- Copper: High-end option offering superior corrosion resistance and aesthetic appeal.
- Lead: Traditionally used but less common today due to environmental concerns.

Shingles and Roofing Coverings

- Asphalt Shingles: Commonly used with asphalt or metal valleys; require proper shingle installation techniques.
- Wood Shingles/Shakes: Require specific valley treatments to prevent water intrusion.
- Clay or Concrete Tiles: Need specialized valley flashing to accommodate their weight and shape.

Underlayment

A crucial component that adds an extra layer of protection beneath shingles or other roofing materials. Types include:

- Synthetic Underlayment: Lightweight, durable, and water-resistant.
- Rubberized Asphalt Underlayment: Used in critical areas like valleys for added waterproofing.
- Felt Paper: Traditional option, less durable than synthetic options.

Step-by-Step Roof Valley Construction Process

Constructing a roof valley involves precise planning and installation techniques to ensure water tightness and durability.

1. Planning and Design

- Determine the valley type (closed or open).
- Decide on materials based on roof slope, climate, and aesthetic preferences.
- Ensure proper valley width (generally 16-24 inches) for adequate water flow and ease of installation.

2. Preparing the Roof Deck

- Inspect and repair the roof deck for integrity.
- Install a solid, flat surface for consistent shingle and flashing installation.
- Ensure proper insulation and ventilation to prevent ice dams and moisture issues.

3. Installing Underlayment

- Lay a high-quality, waterproof underlayment over the entire roof deck.
- Extend underlayment into the valley area, overlapping in a shingle fashion.
- Use synthetic underlayment for better durability, especially in valleys.

4. Installing Valley Flashing

- Cutting and Placement:
 - Cut metal flashing to length, allowing for overlaps.
 - Position the flashing along the valley centerline, extending both up the roof slopes and over the lower edge.
- Sealing and Fastening:
 - Secure flashing with corrosion-resistant nails or screws.
 - Seal overlaps with roofing sealant or butyl tape to prevent water ingress.
- Types of Flashing Installation:
 - Closed Valley: Install the flashing first, then lay shingles over it.
 - Open Valley: Install shingles first, then overlay with metal flashing.

5. Shingle Installation

- Begin shingle installation from the bottom of the roof, working upward.
- In valleys, shingles should be cut to fit neatly into the valley line, ensuring no gaps.
- Use proper shingle overlaps to prevent water from seeping under the shingles.
- For closed valleys:
 - Lay shingles over the flashing, ensuring shingle edges do not extend beyond the valley centerline.
- For woven valleys:
 - Intertwine shingles from both slopes, creating a woven pattern that covers the valley.

6. Final Inspection and Sealing

- Check all seams and overlaps for proper sealing.
- Apply additional sealant or roofing cement at vulnerable spots.
