Understanding Biogas and Its Scientific Foundations

What Is Biogas?

Biogas is a mixture primarily composed of methane (CH_4) and carbon dioxide (CO_2), along with trace amounts of other gases such as hydrogen sulfide (H_2S) and moisture. It is produced through the anaerobic digestion of organic materials like animal manure, agricultural residues, food waste, and sewage sludge. The process occurs in oxygen-free environments facilitated by specific microorganisms, mainly methanogenic bacteria.

Scientific Principles of Biogas Production

The core scientific process behind biogas production is anaerobic digestion, a series of microbial-mediated stages:
