Physiological Focus: The case emphasizes understanding how cardiac output is maintained or compromised, the role of preload, afterload, contractility, and heart rate, alongside neurohormonal responses such as activation of the sympathetic nervous system and the renin-angiotensin-aldosterone system (RAAS).

Key Learning Points:

- The Frank-Starling mechanism: how increased preload initially compensates but can lead to volume overload.
- Neurohormonal activation: maladaptive in chronic heart failure, leading to vasoconstriction and fluid retention.
- Therapeutic implications: use of diuretics, ACE inhibitors, and beta-blockers to modulate physiological responses.

b. Blood Pressure Regulation and Hypertension

Scenario: A patient exhibits sustained high blood pressure with no apparent secondary cause.
