Supplemental Problems and Solutions

Providing solutions to supplemental problems enhances understanding and retention. Below are examples across various topics, with detailed solutions.

1. Kinematics Problem

Problem: An object starts from rest and accelerates uniformly at $(3, \text{ m/s}^2)$. What is its velocity after 8 seconds? What distance does it cover in this time?

Solution:

- Initial velocity, $(u = 0)$
- Acceleration, $(a = 3, \text{ m/s}^2)$
- Time, $(t = 8, \text{ s})$

Velocity after time (t) :

$[$

$$v = u + a t = 0 + (3)(8) = 24, \text{ m/s}$$

$]$

Displacement after time (t) :

$[$

$$s = ut + \frac{1}{2} a t^2 = 0 + \frac{1}{2} (3) (8)^2 = \frac{1}{2} \times 3 \times 64 = 96, \text{ m}$$

$]$

Answer:

- Final velocity: 24 m/s
- Distance covered: 96 meters

2. Dynamics Problem

Problem: A box weighing 50 kg is pulled across a horizontal surface with a force of 200 N. If the coefficient of kinetic friction between the box and the surface is 0.3, what is the acceleration of the

box?

Solution:

- Mass, $(m = 50\text{ kg})$
- Force applied, $(F_{\text{applied}} = 200\text{ N})$
- Coefficient of kinetic friction, $(\mu_k = 0.3)$
- Gravitational acceleration, $(g = 9.8\text{ m/s}^2)$

Step 1: Calculate the normal force (N) :

[

$$N = m g = 50 \times 9.8 = 490\text{ N}$$

]

Step 2: Calculate the frictional force (F_{friction}) :

[

$$F_{\text{friction}} = \mu_k N = 0.3 \times 490 = 147\text{ N}$$

]

Step 3: Find net force (F_{net}) :

[

$$F_{\text{net}} = F_{\text{applied}} - F_{\text{friction}} = 200 - 147 = 53\text{ N}$$

]

Step 4: Calculate acceleration (a) :

[

$$a = \frac{F_{\text{net}}}{m} = \frac{53}{50} = 1.06\text{ m/s}^2$$

]

Answer:

The box accelerates at approximately 1.06 m/s^2 .

3. Work and Energy Problem

Problem: A 10 kg object is lifted vertically upward to a height of 5 meters. How much work is done against gravity? What is its kinetic energy at the top if it is released from rest and falls freely?

Solution:

- Mass, $(m = 10, \text{ kg})$
- Height, $(h = 5, \text{ m})$
- Gravitational acceleration, $(g = 9.8, \text{ m/s}^2)$

Work done against gravity:

[

$$W = m g h = 10 \times 9.8 \times 5 = 490, \text{ J}$$

]

Kinetic energy upon falling:

- Since it is released from rest, energy conservation implies the potential energy converts to kinetic energy:

[

$$KE = m g h = 490, \text{ J}$$

]

Answer:

- Work done against gravity: 490 Joules
- Kinetic energy upon reaching the bottom: 490 Joules

4. Momentum and Collisions Problem

Problem: Two carts collide on a frictionless track. Cart A (mass 2 kg) moving at 3 m/s collides elastically with cart B (mass 3 kg) initially at rest. What are their velocities after the collision?

Solution:

- Initial velocities:

\[

$$v_{A,i} = 3 \text{ m/s}, \quad v_{B,i} = 0 \text{ m/s}$$

\]

- After an elastic collision, both momentum and kinetic energy are conserved.

Step 1: Conservation of momentum:

\[

$$m_A v_{A,i} + m_B v_{B,i} = m_A v_{A,f} + m_B v_{B,f}$$

\]

\[

$$(2)(3) + (3)(0) = 2 v_{A,f} + 3 v_{B,f}$$

\]

\[

$$6 = 2 v_{A,f} + 3 v_{B,f}$$

\]

Step 2: Conservation of kinetic energy:

\[

$$\frac{1}{2} m_A v_{A,i}^2 + \frac{1}{2} m_B v_{B,i}^2 = \frac{1}{2} m_A v_{A,f}^2 + \frac{1}{2} m_B v_{B,f}^2$$

\]

\[

$$\frac{1}{2} \times 2 \times 3^2 + 0 = \frac{1}{2} \times 2 \times v_{A,f}^2 + \frac{1}{2} \times 3 \times v_{B,f}^2$$

\]

\[

$$9 = v_{A,f}^2 + 1.5 v_{B,f}^2$$

\]

Step 3: Solve the system:

From the momentum equation:

\[

$$2 v_{A,f} + 3 v_{B,f} = 6$$

\]

Express $(v_{A,f})$:

\[

$$v_{A,f} = \frac{6 - 3 v_{B,f}}{2}$$

\]

Substitute into kinetic energy:

\[

$$9 = \left(\frac{6 - 3 v_{B,f}}{2}\right)^2 + 1.5 v_{B,f}^2$$

\]

Simplify:

\[

$$9 = \frac{(6 - 3 v_{B,f})^2}{4} + 1.5 v_{B,f}^2$$

\]

\[

$$9 = \frac{36 - 36 v_{B,f} + 9 v_{B,f}^2}{4} + 1.5 v_{B,f}^2$$

\]

Multiply through by 4:

\[

$$36 = 36 - 36 v_{B,f} + 9 v_{B,f}^2 + 6 v_{B,f}^2$$

\]

\[

$$36 = 36 - 36 v_{B,f} + 15 v_{B,f}^2$$

\]

Subtract 36 from both sides:

\[

$$0 = -36 v_{B,f} +$$

Illustrative Examples and Their Solutions

To exemplify how supplemental problems and answers facilitate understanding, consider the following typical physics problem and its detailed solution.

Problem:

A 2 kg block slides down an inclined plane that makes a 30° angle with the horizontal. The coefficient of kinetic friction between the block and the plane is 0.2. Find the acceleration of the block and the time it takes to slide 5 meters down the incline.

Step 1: Understand and Sketch

Visualize the inclined plane with the block, marking angles, forces, and distances. Recognize that forces include gravity, normal force, and friction.

Step 2: Identify Known Values

- Mass, $m = 2 \text{ kg}$
- Incline angle, $\theta = 30^\circ$
- Coefficient of kinetic friction, $\mu_k = 0.2$
- Distance, $s = 5 \text{ m}$

Step 3: Apply Relevant Principles

Use Newton's second law along the incline:

$$a = \frac{F_{\text{net}}}{m}$$

where (F_{net}) includes component of gravity down the incline and friction opposing motion.

Step 4: Calculate Forces

- Gravitational component along the incline:

$$F_{\text{gravity}} = mg \sin \theta$$

- Normal force:

$$N = mg \cos \theta$$

- Friction force:

$$F_{\text{friction}} = \mu_k N = \mu_k mg \cos \theta$$

Step 5: Compute Numerical Values

- $F_{\text{gravity}} = 2 \times 9.8 \times \sin 30^\circ = 2 \times 9.8 \times 0.5 = 9.8 \text{ N}$
- $N = 2 \times 9.8 \times \cos 30^\circ = 2 \times 9.8 \times 0.866 = 16.97 \text{ N}$
- $F_{\text{friction}} = 0.2 \times 16.97 \approx 3.39 \text{ N}$

Step 6: Find Net Force and Acceleration

$$F_{\text{net}} = F_{\text{gravity}} - F_{\text{friction}} = 9.8 - 3.39 = 6.41 \text{ N}$$

$$a = \frac{F_{\text{net}}}{m} = \frac{6.41}{2} \approx 3.2 \text{ m/s}^2$$

Step 7: Calculate Time to Slide 5 Meters

Using kinematic equation:

$$s = \frac{1}{2} a t^2 \rightarrow t = \sqrt{\frac{2s}{a}}$$

$$t = \sqrt{\frac{2 \times 5}{3.2}} = \sqrt{\frac{10}{3.2}} \approx \sqrt{3.125} \approx 1.77 \text{ seconds}$$

Final Answer:

The block accelerates down the incline at approximately 3.2 m/s^2 , taking about 1.77 seconds to slide 5 meters.
