Detailed Solutions for Major Topics

- Number Systems

Key Concepts Covered:

- Rational and irrational numbers
- Real numbers
- Representing real numbers on the number line

Sample Problem and Solution:

Problem: Express $\sqrt{2}$ as a decimal expansion and determine whether it is rational or irrational.

Solution:

$\sqrt{2}$ is approximately 1.4142... and continues without terminating or repeating. Since it has a non-terminating, non-repeating decimal expansion, $\sqrt{2}$ is an irrational number.

Explanation:

Rational numbers can be expressed as fractions with integers in numerator and denominator, with decimal expansions terminating or repeating. $\sqrt{2}$ cannot be expressed as such, hence it is irrational.

- Algebra

Key Concepts:

- Polynomial expressions
- Factorization
- Linear identities

Sample Problem:

Factorize: $x^2 + 5x + 6$

Solution:

The quadratic factors as: $(x + 2)(x + 3)$

Method:

Find two numbers that multiply to 6 and add to 5:

2 and 3

Therefore, the factors are $(x + 2)$ and $(x + 3)$.

- Linear Equations in Two Variables

Key Concepts:

- Graphical solution
- Algebraic solution

Sample Problem:

Solve simultaneously:

$$2x + y = 7$$

$$x - y = 1$$

Solution:

From the second equation, $x = y + 1$.

Substitute into the first:

$$2(y + 1) + y = 7$$

$$2y + 2 + y = 7$$

$$3y = 5$$

$$y = 5/3$$

Now, $x = y + 1 = 5/3 + 1 = 8/3$

Answer: $x = 8/3$, $y = 5/3$

- Geometry

Lines and Angles

- Types of angles
- Angle sum property of triangles

Sample Problem:

In triangle ABC, the angles are in the ratio 2:3:4. Find the angles.

Solution:

Let the angles be $2x$, $3x$, and $4x$.

Sum: $2x + 3x + 4x = 180^\circ$

$9x = 180^\circ$

$x = 20^\circ$

Angles are: 40° , 60° , and 80° .

- Mensuration

Surface Area and Volume of Cubes and Cuboids

Sample Problem:

Calculate the surface area of a cube with side length 5 cm.

Solution:

Surface area = $6 \times \text{side}^2 = 6 \times 5^2 = 6 \times 25 = 150 \text{ cm}^2$

- Statistics

Mean, Median, Mode

Sample Problem:

Find the median of the data set: 3, 7, 8, 5, 12, 7, 3, 6

Solution:

Arrange data: 3, 3, 5, 6, 7, 7, 8, 12

Number of data points = 8 (even)

Median = average of 4th and 5th terms: $(6 + 7) / 2 = 6.5$

- Probability

Basic Concepts:

- Simple probability
- Outcomes and events

Sample Problem:

A die is rolled. Find the probability of getting an even number.

Solution:

Total outcomes = 6

Sample Exercise and Solution:

Exercise: Simplify $\frac{7}{8} + \frac{5}{12}$.

Solution: Find the LCM of 8 and 12, which is 24.

$\frac{7}{8} = \frac{21}{24}$, $\frac{5}{12} = \frac{10}{24}$.

Sum: $\frac{21}{24} + \frac{10}{24} = \frac{31}{24}$.

Final answer: $\frac{31}{24}$ (an improper fraction).
